SECURITY MANAGER

N-able's Security Manager – AV Defender™ delivers powerful virus and malware protection for enterprise-class security for Windows® devices on your clients' networks. Powered by the industry-leading BitDefender® security engine, it is fully integrated into N-central® to deliver comprehensive management from a single pane of glass.

OVERVIEW

Comprehensive Windows Protection
Security Manager – AV Defender™ uses advanced technology to protect your Windows devices from the latest security threats. Bitdefender technology consistently wins independent industry security tests.

Simplified Security Management
Designed specifically to secure the complex IT environments of modern connected companies, AV Defender provides:

- Simplified exclusion management with organizational and system-level Global Exclusions
- Streamlined deployment with rule-based automated configuration, deployment, and migration of your customer environments
- Automatic removal of most previous AV products
- Increased visibility of anti-virus activity with comprehensive Security Events
- Enhanced monitoring with a dashboard-style view of anti-malware activity
- Robust reports to quickly and dynamically provide insight into your environment

Simple Rollout
Replacing any widely used system can be daunting. Security Manager – AV Defender removes the hassle by deploying at the click of a button and automatically uninstalling most legacy endpoint clients. Additionally, N-central allows you to schedule deployment and customer-system reboots.

Comprehensive Feature Set
AV Defender provides more than just antimalware protection. It includes a fully featured two-way firewall, intrusion detection, anti-phishing, web filtering, and user control. This comprehensive functionality is essential in blocking increasingly diverse threats from infecting end-user systems and server endpoints.

✓ SCALABLE VIRUS AND MALWARE PROTECTION

✓ AUTOMATIC UPDATES

✓ MULTIPLE DEPLOYMENT OPTIONS

✓ SIMPLE ADMINISTRATION

> **"We can do it better, faster and cheaper than our clients can."**

FEATURE DETAILS

Comprehensive Protection
Delivers an all-in-one security solution, including anti-virus, antimalware, personal firewall and host intrusion prevention.

Configuration Management
Configure all of the settings that will be applied to multiple devices upon installation of the endpoint security software, significantly decreasing setup time.

Around-the-clock Updates
Automatically download the latest detection updates even if a device is temporarily outside its internal network. This provides customers with maximum protection anywhere, anytime.

Multi-Stakeholder Reports
Communicate vital information to executive, management, operational and technical stakeholders, and external parties such as auditors.

Real-Time Incident and Alerts Monitoring
Use the centralized monitoring to unify the information of all protection across all customers, allowing your technical staff to take actions in real time. Define the type of security events that will dispatch an email notification.

Easy Deployment
Provides simple remote deployment by device or device group, ensuring bandwidth-friendly mass rollout and signature file updates. Existing protection found on a device will be removed automatically in most cases.

ADVANTAGES

Protect critical and sensitive information: Allows you to effectively guard your customers' most valued assets by providing a security solution that will protect information on all network endpoints.

Increase productivity: Reduce interruptions or downtime in your customers' networks by reducing downtime and controlling the use of unproductive or banned applications.

Reduce operational complexity and lower costs: Delivers complete endpoint security in a single solution, eliminating the need for multiple security tools using multiple consoles.

✓ Anti-virus and anti-spyware
✓ Firewall
✓ Intrusion prevention
✓ Proactive detection
✓ On-demand behavioral analysis
✓ Rule-based system behavior blocking
✓ Malware audit & disinfection service
✓ Application control
✓ 2007 WildList® proactive detection
✓ Behavioral analysis detection
✓ Rootkit detection
